How much power does a 24V inverter consume?

A good sized 24V inverter could use about as much power just being on as your lights do. If the lights consume 45 watts and run for 12 hours a day, the total power usage would be 45 watts x 12 hours = 540 watts. The battery power required for losses plus the load could double that. The lights

themselves may be DC, using a small transformer (wall wart) to go from 120Vac to (likely) 12Vdc.

How do I choose the right 24V inverter?

Choose the right 24V inverter by adding up the wattage of the devices you want to run, then match it with one of our models. Shop now at RoadKing and get the power you need wherever your journey takes you.
