Overview

Can Azerbaijan be a solar energy producer?

The region's favourable climate, boasting 2,400-3,200 hours of sunshine annually, gives Azerbaijan strong potential as a solar energy producer. In October, the 230 MW Garadagh Solar PV Plant was inaugurated. Several other projects are underway, and the country continues to sign agreements with stakeholders interested in its solar energy.

What is the economic potential of solar energy in Azerbaijan?

Azerbaijan's economic potential of solar energy is 23 GW. The region's favourable climate, boasting 2,400-3,200 hours of sunshine annually, gives Azerbaijan strong potential as a solar energy producer. In October, the 230 MW Garadagh Solar PV Plant was inaugurated.

How can Azerbaijan improve energy security?

Diversifying and improving the energy capacity of the country to ensure energy security. Azerbaijan has significant untapped renewable energy potential, as it is a relatively sunny and windy country, and it also has sizeable hydro, biomass and geothermal resources.

How can Azerbaijan generate electricity from biomass?

Rapid growth in industry, agriculture and social services in Azerbaijan is creating new opportunities for electricity generation from biomass derived from combustible industrial waste, forestry and food processing waste, agricultural waste, and other biological substances. The Ministry of Energy estimates technical potential of 380 MW.

Can Azerbaijan create a green hydrogen sector?

Azerbaijan is actively working to bring its vision of a dynamic green hydrogen sector to life. The collaboration agreements inked with global private sector actors will enable the development of around 10 GW of renewable energy in

the medium term that can contribute to the production of hydrogen.

How windy is Azerbaijan?

Azerbaijan is relatively windy, especially along the Caspian Sea coast. According to the Ministry of Energy, the country has roughly 3 000 MW of technical and 800 MW of economic wind power potential. This economic potential could generate around 2.4 TWh and conserve approximately 1 Mt of conventional fuel, avoiding the corresponding CO₂ emissions.
