BESS Energy Storage Capacity Prices in the Middle East

Overview

Is large-scale energy storage a viable option in the Middle East?

Until recently, large-scale energy storage was barely a consideration in the Middle East, where fossil fuels have long dominated power generation. With renewable energy projects expanding across the region, energy storage has started gaining traction.

Which MENA region will be a Bess market in 2026?

The rapid growth rate of energy storage in the MENA region, led by the GCC, is surprising many analysts. Saudi Arabia, in particular, is set to be the third biggest global BESS market after the USA and China in 2026.

What is Bess & how does it work?

Besides providing storage, BESS enables capacity firming, energy arbitrage, frequency regulation, and other ancillary services that improve grid resilience and efficiency.

What is the Bess project?

The BESS project is an addition to the 500 MW Abydos solar PV project under construction. Meanwhile, UAE's EWEC has recommended deploying 300 MW/300 MWh of BESS capacity within the next three years. While the demand for energy storage is growing, the technology has existed in other forms for years.

Why are batteries becoming a preferred energy storage solution in the Middle East?

In the Middle East and African region, the demand for batteries has increased in the Middle East as a preferred energy storage solution primarily due to technological innovation and the reduction of battery costs.

What are the benefits of Bess in the MENA region?

The universal benefits of BESS apply just as strongly to the MENA region: they can support in harnessing the full potential of renewable energy by storing & shifting record low-cost PV or wind power generation to times of the day when demand for electricity is at its highest.
