Backup power generation for communication base stations

Overview

Why is backup power important in a 5G base station?

With the rapid expansion of 5G networks and the continuous upgrade of global communication infrastructure, the reliability and stability of telecom base stations have become critical. As the core nodes of communication networks, the performance of a base station’s backup power system directly impacts network continuity and service quality.

Which battery is best for telecom base station backup power?

Among various battery technologies, Lithium Iron Phosphate (LiFePO4) batteries stand out as the ideal choice for telecom base station backup power due to their high safety, long lifespan, and excellent thermal stability.

What makes a telecom battery pack compatible with a base station?

Compatibility and Installation Voltage Compatibility: 48V is the standard voltage for telecom base stations, so the battery pack’s output voltage must align with base station equipment requirements. Modular Design: A modular structure simplifies installation, maintenance, and scalability.

Why is BS power backup important?

Therefore, BS power backup is in great need to keep the reliability of future mobile networks, especially for the macro BSs with large areas of network coverage and small ones serving mission-critical mobile and edge services (e.g., connected and automated vehicles).

Can a battery group be used as a backup power supply?

In practice, the battery groups (either traditional lead-acid batteries or emerging lithium ones) are deployed as the backup power supply of BSs. In our scenario, one battery group could be shared by multiple BSs nearby to exploit the statistical multiplexing gain, and the multiple BSs sharing the same battery group form a virtual cell (VC).

What is the best backup power allocation framework for BSS?

In this chapter, we proposed an optimal backup power allocation framework for BSs, ShiftGuard, to help the mobile network operators reduce their backup power cost in shifting to the 5G network and beyond.
