Base station communication equipment configuration

Overview

At the heart of mobile communication networks lies the main base station equipment. Central to this setup are three critical components— BBU (Baseband Unit), RRU (Remote Radio Unit), and AAU (Active Antenna Unit) —terms you'll frequently encounter in this field.

At the heart of mobile communication networks lies the main base station equipment. Central to this setup are three critical components— BBU (Baseband Unit), RRU (Remote Radio Unit), and AAU (Active Antenna Unit) —terms you'll frequently encounter in this field.

The basic base station equipment for digital mobile communications systems consists of amplifiers (AMP) to amplify the transmission and reception signals to desired levels, modems (MDE) to convert base band signals to high-frequency signals, speech processors (SPE) to convert voice signals to digital code strings, base station control equipment (BCE) that allocates radio channels and switches over channels with adjacent base stations, and the base station antennas (ANT).
