# Brazil s new energy storage

## Overview

---

The adoption of energy storage technology such as lithium-ion batteries and pumped hydro could reduce the average cost of the Brazilian electricity system by up to 16% in 2029, in addition to contributing to reliability and enabling a greater share of renewables without increasing.

The adoption of energy storage technology such as lithium-ion batteries and pumped hydro could reduce the average cost of the Brazilian electricity system by up to 16% in 2029, in addition to contributing to reliability and enabling a greater share of renewables without increasing.

A study by Brazilian consultancy Greener has indicated that the country installed 269 MWh of energy storage capacity in 2024, growth of 29% from 2023. Demand for battery energy storage system (BESS) components grew 89% in Brazil from 2023 to 2024 and most of the resulting systems are likely to be.

The auction aims to boost Brazil's grid reliability by integrating energy storage for wind and solar power. Credit: r.classen/Shutterstock. Brazil is set to conduct its first auction for adding batteries and storage systems to the national power grid, as reported by Reuters. The auction, to take.

Storage is essential to expand renewables penetration and ensure grid flexibility, according to a study by consultants PSR. Regulatory and tax barriers still limit the sector, however, and new revenue sources are needed to make projects viable. From ESS News The adoption of energy storage.

Brazil's federal government is preparing to run the country's first-ever battery storage auction later in 2025, the Ministry of Mines and Energy (MME) has confirmed. In a statement, energy minister Alexandre Silveira said the new tender would be "crucial" for reinforcing the power system. He.

There has been a surge in the introduction of wind and solar power, especially small-scale, distributed generation projects, mainly solar photovoltaic, which reached an installed capacity of 37GW in 2025. While a harbinger of good news from a sustainability perspective, the introduction of.

Brazil cemented its position as Latin America's solar leader, ranking as the world's fourth-largest solar market in 2024 with 18.9 GW of new installations. While 2025 growth is projected to be modest (19.2 GW), the long-term outlook remains robust, with conservative estimates pointing to 90 GW and.
