Burkina Faso Smart Solar Power System

Overview

The Government of Burkina Faso has signed a Public-Private Partnership (PPP) agreement with a local developer and a Dutch clean energy investment firm to develop a major solar and battery storage system. How much solar energy does Burkina Faso have?

Early solar energy. Burkina Faso benefits from daily sunlight of 5.5 KWh/m² for 3000 to 3500 hours per year, with a uniformly distributed solar resource across the national territory, yielding an.

Where does Burkina Faso get its electricity from?

More than half of the electricity consumed in Burkina Faso is imported from neighboring countries like Cote d'Ivoire and Ghana. To achieve sustainable development goals, the Burkina Faso government has made strategic investments in deploying large-scale solar PV systems .

How much solar power will Burkina Faso produce in 2020?

In 2020, the combined electricity generation from the Zagtouli and Ziga plants will account for nearly 3% of the country's total electricity production. Figure 1 and Figure 2, presented below, illustrate the annual installed solar PV capacity worldwide and in Burkina Faso, respectively, from 2011 to 2020 . Figure 1.

What changes have been made in Burkina Faso since the last iteration?

UNCILMajor changesSince the last iteration, significant progress has been made with the successive commissioning of new solar power plants in Burkina Faso in 2024, and the continuation of electrification efforts despite the security crisis. The national coverage rate has increased to 50%, compared to a national electrification rat.

Does Burkina Faso have a power shortage?

The report highlights the dominance of thermal power generation using fossil fuels and the persistent shortfall in meeting growing electricity demand. More

than half of the electricity consumed in Burkina Faso is imported from neighboring countries like Cote d'Ivoire and Ghana.

How Zagtouli grid-connected solar PV system can benefit Burkina Faso?

The Zagtouli Grid-Connected Solar PV System Socioeconomic Impacts The initial step in providing electricity access to people is to increase the supply while reducing costs. This objective can be achieved through the development of solar energy production in Burkina Faso, a country with an estimated solar irradiation of 5.5 kWh/m²/day.
