Communication base station inverter 48V lithium iron phosphate

Overview

Which battery is best for telecom base station backup power?

Among various battery technologies, Lithium Iron Phosphate (LiFePO₄) batteries stand out as the ideal choice for telecom base station backup power due to their high safety, long lifespan, and excellent thermal stability.

What is a lithium iron phosphate (LiFePO₄) battery?

Lithium Iron Phosphate (LiFePO₄) batteries are a type of lithium-ion battery with a lithium iron phosphate cathode and typically a graphite anode. Compared to traditional lead-acid batteries or other lithium-ion batteries (such as ternary lithium batteries), LiFePO₄ batteries offer several notable advantages:

What is a 48V 100Ah LiFePO₄ battery pack?

Our 48V 100Ah LiFePO₄ battery pack, designed specifically for telecom base stations, offers the following features: **High Safety:** Built with premium cells and an advanced BMS for stable and secure operation. **Long Lifespan:** Over 2,000 cycles, significantly reducing replacement and maintenance costs.

What makes a telecom battery pack compatible with a base station?

Compatibility and Installation Voltage Compatibility: 48V is the standard voltage for telecom base stations, so the battery pack's output voltage must align with base station equipment requirements. **Modular Design:** A modular structure simplifies installation, maintenance, and scalability.

What is a wide temperature range LiFePO₄ battery?

This translates to lower replacement frequency and maintenance costs. Wide Temperature Range LiFePO₄ batteries operate reliably in temperatures ranging from -20°C to 60°C, making them suitable for the diverse and often extreme environments of telecom base stations.
