On Saturday, Cuba initiated the installation of solar energy storage batteries at four electrical substations, marking a significant step in addressing its energy challenges. These Battery Energy Storage Systems (BESS), also referred to as "concentrator units," are being placed at Cueto 220, Bayamo.

The BESS (Battery Energy Storage System) will also be referred to as "concentrating units" and will be installed at the electrical substations of Cueto 220, Bayamo 220, Cotorro 220, and Habana 220, official journalist José Miguel Solís reported on Facebook, where he shared images of the.

Yet Cuba's power outages increased by 23% in 2023 despite adding 450MW solar capacity. What's really going wrong?

Cuba currently operates 186 renewable parks generating 25% of its electricity. But here's the kicker - less than 15% have proper energy storage systems. "We're basically throwing away.

The Cuban government has unveiled a bold initiative to introduce one thousand megawatts (MW) of solar energy into the National Electric System (SEN) by 2025. This effort, which involves establishing approximately fifty photovoltaic parks across the nation, aims to address Cuba's persistent energy.

That's exactly what happened in October 2024 when Cuba's Matanzas thermal power plant tripped offline, triggering the worst blackout in 30 years [1]. With 1,740 MW of electricity shortage during peak hours [2], this crisis revealed Cuba's energy Achilles' heel - an aging fleet of oil-dependent.
