In the midst of a complex energy crisis and with fuel deficits affecting electricity generation, the Cuban government announced that it will begin the marketing of solar panel systems presumably in national currency for housing. The measure seeks to ease the burden on the National Electricity.

The company produces high-efficiency monocrystalline and polycrystalline solar panels, inverters, lithium, AGM and gel batteries, installation systems, and MPPT and PWM charge controllers, with power ranges from 5W to more than 650W per panel. "In my neighborhood, when there are blackouts, my house.

In a context marked by severe blackouts in Cuba, the director of the Electric Union of Cuba (UNE), Alfredo López Valdés, suggested to the citizens of the island that they consider purchasing solar panels as an alternative to become independent from the national electrical system. His statements.
