

ContainerPower Energy Solutions

Cuban solar energy storage battery company

Overview

What is the energy situation in Cuba?

The energy situation in Cuba is critical. The Cuban electrical system has suffered for years due to a lack of investment, aging infrastructure, and difficulties in obtaining fuel. First published in Spanish by El Toque and translated and posted in English by Havana Times.

How much solar power will Cuba have in 2026?

China already sent Cuba equipment for more than 100 MW of solar capacity through a different program. By January 2026, about 1,100 MW of this new capacity is expected to be operational, according to the Cuban government. As the primary power grid fails, Cubans with resources are taking matters into their own hands, often in desperate ways.

How much of Cuba's energy is renewable?

The government set a goal of deriving 37 percent of Cuba's energy from renewable sources by 2030; so far they've reached only 3 percent. Cuba is actively looking to partner internationally on energy initiatives. Agreements with Russia primarily focus on modernizing existing thermal facilities and possibly constructing new ones.

How many solar parks will Cuba build by 2025?

The Cuban government's plan is to install 55 solar parks similar to the one in Cotorro by 2025. The total capacity will be 1,200 MW. These are part of a broader project running until 2028, which aims to build 92 parks, with the goal of adding more than 2,000 MW to the National Electro-Energy System.
