

ContainerPower Energy Solutions

Cyprus 50 kW solar power generation

Overview

Can Cyprus meet 40% of its energy demand by 2030?

Over the last several years, solar energy projects have become a thriving segment for Cyprus. The International Renewable Energy Agency (IRENA) has been working with Cyprus assessing the country's potential in its transition to renewable energy and noted that Cyprus has the potential to meet 40% of its energy demand through solar power by 2030.

Will Cyprus achieve 812 MW solar PV capacity by 2030?

Solar photovoltaic (PV) installation installed capacity increased by almost 40%, from 342 MW in 2023 to 476 MW by April 2023. This is about 32% of conventional power installed capacity, quite significant for a small country like Cyprus. And there is huge potential. The target is to achieve 812 MW solar PV capacity by 2030.

What is Cyprus doing to reduce energy costs?

Cyprus has prioritised work for both the reduction of energy costs and the further exploitation of the national potential of renewable energy and energy efficiency.

What does the new energy plan mean for Cyprus?

The revised plan will aim to provide a detailed map of the country's transition to a more competitive, lower greenhouse gas emissions energy system, by establishing adequate policies and measures to enable Cyprus to successfully meet its new, more ambitious energy objectives for 2030.

What is Cyprus' energy policy?

Cyprus' energy policy is providing financial support to RES projects, and a special fund was created aiming to support RES and energy saving investments in Cyprus, with revenue derived from consumers paying a 'green tax' levied on electricity bills.

Can Cyprus become more energy efficient?

With new investment and projects in the pipeline, along with a government determined to develop renewable solutions, Cyprus can finally harness its natural potential to become far more energy efficient.
