Czech photosynthetic energy storage project

Overview

With €279 million in EU funding approved for 1500MWh of new energy storage capacity, the country is set to double its current storage capabilities and accelerate its transition away from fossil fuels.

With €279 million in EU funding approved for 1500MWh of new energy storage capacity, the country is set to double its current storage capabilities and accelerate its transition away from fossil fuels.

The Czech Republic is taking a significant step towards a more resilient and sustainable energy future! With €279 million in EU funding approved for 1500MWh of new energy storage capacity, the country is set to double its current storage capabilities and accelerate its transition away from fossil.

Czechia has increased funding for its interest-free loan program for commercial and industrial (C&I) solar and storage projects to CZK 3 billion (\$132.2 million) after strong demand exhausted the previous budget. Czechia's Ministry of Industry and Trade (MIT) has added CZK 1 billion to its.

The European Commission (EC) has authorized a €279 million (\$303 million) Czech state aid scheme to support investment into electricity storage facilities and foster the transition towards a net-zero economy. In an announcement released on March 7, 2025, the executive arm of the European Union said.

With the growing share of renewable energy and the rapidly decreasing costs of battery storage technologies, the Czech Republic is experiencing a new energy boom. Services that support grid stability – known as Frequency Containment Reserve (FCR) – are becoming a highly attractive business.

CNTE's C&I energy storage initiative has been successfully deployed in Brno, Czech Republic, facilitating a green transformation for the local industrial park. With substantial electricity demands, the park's extensive photovoltaic array is complemented by the storage system, enhancing the.

However, the recent energy crisis, together with pressure from stakeholders and regulatory bodies to decarbonise, has triggered an unprecedented shift in

the country's energy market. Between 2019 and 2020, coal production decreased by 24%. This downward trajectory continues as the country rapidly. Are there any large-scale electricity storage projects in the Czech Republic?

There are no other larger-scale electricity storage projects currently being developed in the Czech Republic. However, the Czech government provides subsidies to household projects consisting of photovoltaic panels with electricity storage systems.

Is there a future for energy storage in the Czech Republic?

Despite the ongoing discussions, there is no significant development in the area of energy storage. In 2015, the Czech Government adopted the National Action Plan for Smart Grids ("NAPSG") prepared by the Ministry of Industry and Trade under principles set out in the update of the State Energy Concept, which was also introduced in 2015.

How does the Czech government subsidise photovoltaic panels?

The Czech government subsidises the installation of photovoltaic panels located on domestic properties producing energy for their own consumption and the purchase of co-located energy storage solutions. These subsidies are provided under the "New Green Savings Programme" administered by the State Environmental Fund.

Will a battery storage system help Czech companies achieve net zero?

The high penetration of renewable generation projects in the region could deliver a large amount of clean energy and really accelerate the journey to net zero, but at the moment Czech companies are not in a position to reap the full benefits of solar and other renewable energy sources. To do so, battery storage will be essential.

What is CNTE's C&I energy storage project?

1MW/1MWh Project Highlight CNTE's C&I energy storage initiative has been successfully deployed in Brno, Czech Republic, facilitating a green transformation for the local industrial park.

How has the energy crisis impacted the Czech Republic?

With coal dominating the energy mix, the Czech Republic has traditionally enjoyed low electricity prices and a steady supply of domestic fuel. However,

the recent energy crisis, together with pressure from stakeholders and regulatory bodies to decarbonise, has triggered an unprecedented shift in the country's energy market.
