Distributed Solar Energy Storage in 2025

Overview

US Distributed Solar-plus-storage 2025 Outlook - This report leverages Wood Mackenzie's project-level distributed solar data to provide a comprehensive analysis of the US distributed solar-plus-storage market, covering the residential, commercial, and community segments. What is energy storage in 2025?

Energy Storage in 2025: What's Hot and What's Next?

The energy storage landscape is changing quickly as scientists work to create better and longer-lasting storage solutions. Experts are focused on improving smart grids to ensure that electricity systems work well and are cost-effective.

What will storage be like in 2025?

Europe saw a pivotal moment when the grid-scale segment experienced a significant surge, surpassing the distributed segment for the first time. In Latin America, momentum was built as storage deployments increased by 42%. In 2025, emerging markets for storage will be on the rise.

Which emerging markets will lead the storage industry in 2025?

In Latin America, momentum was built as storage deployments increased by 42%. In 2025, emerging markets for storage will be on the rise. Saudi Arabia will lead the charge, fuelled by its expansion of solar and wind generation.

Which countries will see the most solar power installations in 2025?

The US saw record installations and another 20% in growth is forecast for 2025 – though President Trump's re-election has brought policy uncertainty. China held its leading position in terms of capacity growth due rapid adoption of wind and solar energy and required pairing with storage systems.

How big is global renewable capacity in 2025?

The numbers tell a compelling story. Global renewable capacity is set to continue with robust growth in 2025, with forecasts pointing to more than 500 GW of new solar installations, 130 GW of new wind capacity, and over 50 GW of new battery storage.

Is China entering a new era of energy storage demand?

Mainland China accounts for most of the global energy storage demand, driven in the near term by regional requirements for new utility-scale wind and solar projects to include energy storage capacity. However, the Chinese market is entering an era of change.
