# Does the inverter need to communicate with the battery

## Overview

---

How does a battery-inverter system work?

In a power system with closed-loop communication, the inverter, solar charge controllers, and other components do not control the battery. Instead, the battery informs the decisions made by everything else in the system. The performance of any battery-inverter combination depends on how effectively the battery can fulfill this role.

How to connect a battery to an inverter?

**Power Cables:** Use appropriately sized power cables to connect the battery to the inverter. The cable size should be chosen based on the current rating of the system to minimize power loss and avoid overheating. **Communication Cables:** For communication, use the cables specified by the manufacturers.

Can a solar inverter communicate with a lithium ion battery?

This is made possible with the solar inverter protocol built inside, as seen with REDWAY battery. The solar inverter also comes with lithium-ion battery protocols, so the solar inverter and lithium-ion battery may communicate with one another. This connection facilitates communication with the BMS system.

What makes a good battery-inverter combination?

The performance of any battery-inverter combination depends on how effectively the battery can fulfill this role. For the battery to receive what it needs and for the system to operate at peak performance, these control messages must be accurate and well-understood by the rest of the system. As you will see, this is not always a given.

Are all inverters compatible with all lithium batteries?

Not all inverters are compatible with all lithium batteries. Therefore, it is crucial to ensure that the inverter you choose is designed to work with the specific type of lithium battery you plan to use. Check Manufacturer

Specifications: Both the battery and inverter manufacturers typically provide a list of compatible products.

Are budget battery companies compatible with inverters?

Most budget battery companies don't have support from the inverter companies they claim compatibility with. Rather, they reverse-engineer communication protocols established by officially supported brands or simply buy and incorporate their BMS boards.
