Emergency communication high altitude base station

Overview

In the last few years, a new set of options have been added in the form of high altitude platform stations (HAPS) and unmanned aerial vehicles (UAVs) that operate as mobile telecom providers, mostly operating at stratospheric altitudes of ~20 km, or other low altitudes, above earth; in our days, it has been deeply studied that near-space platforms could be safely deployed at altitudes in the 17-25 km range.
