# Energy Storage Thermal Power and New Energy Centralized Control

## Overview

---

What is the Technology Strategy assessment on thermal energy storage?

This technology strategy assessment on thermal energy storage, released as part of the Long-Duration Storage Shot, contains the findings from the Storage Innovations (SI) 2030 strategic initiative.

How do energy management systems work?

Coordination of multiple grid energy storage systems that vary in size and technology while interfacing with markets, utilities, and customers (see Figure 1) Therefore, energy management systems (EMSs) are often used to monitor and optimally control each energy storage system, as well as to interoperate multiple energy storage systems.

Why do we need a co-optimized energy storage system?

The need to co-optimize storage with other elements of the electricity system, coupled with uncertain climate change impacts on demand and supply, necessitate advances in analytical tools to reliably and efficiently plan, operate, and regulate power systems of the future.

What is thermal energy storage?

Thermal energy storage in buildings can be used to adjust the timing of electricity demand to better match intermittent supply and to satisfy distribution constraints. TES for building heating and cooling applications predominantly utilizes sensible and latent heat technologies at low temperatures (i.e., near room temperature).

What is a highly centralized energy management system architecture?

In a highly centralized architecture, the optimal dispatches (i.e., power commands) are calculated at the control center and sent to each local EMS. In a highly decentralized architecture, the central EMS may not exist, therefore, EMS functions are only performed at the local EMSs. Figure 2. Energy

How is energy stored in sensible heat?

In sensible heat, energy is stored by raising the temperature of a medium. The amount of energy stored is proportional to the physical properties of the storage material, including density, volume, specific heat, and temperature change of the storage material .
