

ContainerPower Energy Solutions

Energy storage power station public point

Overview

Energy storage is essential to a resilient grid and clean energy system. Learn about the types of energy storage, available incentives, and more.

How will a 100MW battery energy storage system work?

The facility will serve as a large-scale battery energy storage system capable of charging from, and discharging into, the New York power grid. When fully functional, the 100MW battery energy storage project will be able to discharge electricity to the grid particularly during peak demand.

Should energy storage be included in the electric grid?

Integrating storage in the electric grid, especially in areas with high energy demand, will allow clean energy to be available when and where it is most needed. As New York continues to invest and build a cleaner grid, energy storage will allow us to use existing resources more efficiently and phase out the dirtiest power plants.

Why is energy storage important?

Energy storage is essential for creating a cleaner, more efficient, and resilient electric grid. Additionally, these projects will provide meaningful benefits to Disadvantaged Communities and Low-to-Moderate Income New Yorkers. Energy storage is essential to a resilient grid and clean energy system.

How long can an electrical ESS store energy?

Most electrical ESS can store energy for long periods but can only discharge at their full capacity for very short durations (i.e., seconds or minutes). These storage systems are in an early phase of development and have seen limited deployment in the power sector due to their short discharge duration and high cost.¹²

How has energy storage changed over the past decade?

Deployment of energy storage across the U.S. has increased significantly in the past decade, mostly driven by individual state and local government

policies to support acceleration of renewable energy resources for a more robust, reliable, and resilient grid.

When will energy storage projects be regulated?

The storage industry anticipates this to be passed into law in 2022, and that it will apply to projects that achieved commercial operation after December 31, 2020, reducing the risks and uncertainty in energy storage project economics.
