Exterior wall solar panels

Overview

Can solar panels be mounted on a wall?

Roof-mounted solar panels are usually titled at a 20-50 degree angle, which allows them to capture sunlight when the sun is high in the sky. But most wall-mounted panels are parallel to the wall, or only slightly tilted. It's also harder to fit as many solar panels on a wall as you would on a roof.

Are wall-mounted solar panels better than roof-mounted panels?

Although they won't harness as much energy as roof-mounted panels, wall-mounted systems allow people to introduce more green energy to their home, even if their roof isn't strong enough for solar panels. They can also provide supplemental energy if the homeowner has run out of space for panels on the roof.

Should I get wall-mounted solar panels?

You should only get wall-mounted solar panels if you have a large south-facing wall, and you're unable to mount them on your roof. Since most roofs are already at an angle, they're usually the optimal place to place solar panels - not to mention they're the highest point of the property.

What angle should wall-mounted solar panels be placed?

Where possible, wall-mounted panels should be titled to a 60-degree angle, which is the optimal angle for capturing sunlight when the sun is low in the sky. It's also best to place wall-mounted solar panels on a south-facing wall, as this will expose them to the most direct sunlight throughout the day.

What is Solar Siding?

Solar Siding refers to a prefabricated, all-in-one system that integrates all the layers of the wall with a power generating exterior material. The perforated metal skin of this system helps ventilate the wall cavity, cooling down and increasing the efficiency of the system. Solar Siding is designed to help cool

down the building and generate power at the same time.

Can you put solar panels on your roof?

If you can't put solar panels on your roof, don't worry, this doesn't mean you can't install them at all. Even though the cost of roof-mounted solar panels tends to be lower, wall-mounted solar panels can still be a handy way for homeowners to benefit from solar power. But are they the right option for you?
