

## ContainerPower Energy Solutions

# Georgia coal-to-electricity solar power generation for home use

## Overview

---

Explore Georgia Power's energy sources—solar, nuclear, natural gas, and more—powering homes and businesses statewide reliably.

Explore Georgia Power's energy sources—solar, nuclear, natural gas, and more—powering homes and businesses statewide reliably.

Georgia is a booming state that relies on a diverse mix of resources to power its millions of homes and businesses. While natural gas is 40-50 percent of our generation capacity, the share of generation produced from carbon-free or carbon-neutral sources is growing steadily with the completion of.

The Vogtle nuclear plant in Waynesboro, Georgia, is the nation's largest nuclear power plant, with four reactors that have 4,500 megawatts of combined generating capacity. In 2024, natural gas accounted for 41% of Georgia's total electricity net generation and nuclear power provided 34%. Coal.

Freight trains encircle, and earth moving equipment dots, the massive coal yard in front of Georgia Power's Plant Scherer in 2019. Georgia Power's newly filed first draft of its next plan for generating electricity in the coming decades describes how explosive business growth in the state could.

In Georgia (US), electricity consumption from June 2024 through May 2025 presents a diversified energy mix. Approximately 49% of the state's electricity comes from fossil fuels, with gas alone accounting for almost 37%. Coal contributes a bit over 12%. Low-carbon energy sources, comprising nuclear.

To meet increasing electricity demand, Georgia Power is strategically expanding its diverse energy mix. Together with Inman Solar, Georgia Power developed 11 new distributed generation solar projects totaling 50 MWdc. This portfolio is expected to produce more than 90,000 MWh of solar energy.
