# How much is the EMS battery for mobile base station equipment

## Overview

---

Which battery is best for telecom base station backup power?

Among various battery technologies, Lithium Iron Phosphate (LiFePO<sub>4</sub>) batteries stand out as the ideal choice for telecom base station backup power due to their high safety, long lifespan, and excellent thermal stability.

What makes a telecom battery pack compatible with a base station?

Compatibility and Installation Voltage Compatibility: 48V is the standard voltage for telecom base stations, so the battery pack's output voltage must align with base station equipment requirements. Modular Design: A modular structure simplifies installation, maintenance, and scalability.

How do you protect a telecom base station?

Backup power systems in telecom base stations often operate for extended periods, making thermal management critical. Key suggestions include:  
Cooling System: Install fans or heat sinks inside the battery pack to ensure efficient heat dissipation.

What is a battery management system (BMS)?

Battery Management System (BMS) The Battery Management System (BMS) is the core component of a LiFePO<sub>4</sub> battery pack, responsible for monitoring and protecting the battery's operational status. A well-designed BMS should include:  
Voltage Monitoring: Real-time monitoring of each cell's voltage to prevent overcharging or over-discharging.

What makes a good battery management system?

A well-designed BMS should include:  
Voltage Monitoring: Real-time monitoring of each cell's voltage to prevent overcharging or over-discharging.  
Temperature Management: Built-in temperature sensors to monitor the battery pack's temperature, preventing overheating or operation in extreme cold.
