While energy storage is already being deployed to support grids across major power markets, new McKinsey analysis suggests investors often underestimate the value of energy storage in their business cases.

The revenue potential of energy storage is often undervalued. Investors could adjust their evaluation approach to get a true estimate—improving profitability and supporting sustainability goals. As the global build-out of renewable energy sources continues at pace, grids are seeing unprecedented.

According to a recent McKinsey report on long duration energy storage, the energy storage sector will experience a whopping 400x growth in the next 20 years, and less than 1% of it has been built out. There are many ways that storage can make money today, and they vary based on the kind of storage.

How much profit does an energy storage power station make?
