Huawei 5g base station power consumption optimization solution

Overview

Does 5G BS use a lot of power?

A substantial quantity of power is used by 5G BS. Radio transmitters and processors are a couple of base station components whose power consumption can be optimized with the use of PSO. PSO can assist in lowering the consumption of energy while preserving network performance by modifying parameters like transmission power and duty cycles.

How does Huawei's Green GSM base station work?

Huawei's green GSM base station uses multi-density carrier and RF broadband technology, with each module supporting four to six carrier waves. Its advanced power amplification chips and Doherty amplifier unit improve amplification efficiency by over 45 percent, while its energy control software reduces static energy consumption by over 60 percent.

Does 5G BS use PSO?

Until the optimum amount of iterations has been achieved, this procedure is repeated. A substantial quantity of power is used by 5G BS. Radio transmitters and processors are a couple of base station components whose power consumption can be optimized with the use of PSO.

Is 5G base station power consumption accurate?

esan@huawei.com Abstract—The energy consumption of the fifth generation (5G) of mobile networks is one of the major concerns of the telecom industry. However, there is not currently an accurate and tractable approach to evaluate 5G base stations (BSs) power consumption. In this article, we pr.

How can a 5G BS be optimized?

A range of optimization approaches, namely PSO, ABC, and GA, have been employed to obtain the best possible (optimal) cost for the system. 5G BSs cost around four times as much power as 4G but offer significantly faster

speeds, latency, dependability, and data service availability.

How to optimize a base station's energy consumption?

The base station's average energy consumption during a certain time period has been estimated. A range of optimization approaches, namely PSO, ABC, and GA, have been employed to obtain the best possible (optimal) cost for the system.
