Huawei Ethiopia double-glass modules

Overview

What is Ethio Telecom em 2.0?

The EM 2.0 model is a partnership between Ethio Telecom and Huawei that has accelerated digitalization in Ethiopia and provides a valuable roadmap for transformation in emerging markets worldwide. The light of digitalization is now shining on Africa, transforming the continent into one that is brimming with dynamism and a growing digital economy.

What is a double glass solar module?

In the ever-evolving world of photovoltaic technology, double glass solar modules are emerging as a game-changer. By encapsulating solar cells between two layers of glass, these modules offer unparalleled durability and efficiency. But what exactly sets them apart?

What are double glass solar modules?

.

Does Ethio Telecom have a cloud-based industry solution?

In the enterprise market, the carrier promoted cloud-based industry solutions. To date, more than 90 enterprises have become the carrier's targets for market expansion. ethio telecom had integrated its fintech cloud, public cloud, and government cloud services based on its multi-cloud convergence strategy.

What is a double glass module?

In contrast, double glass modules replace the polymer layer with another glass sheet, creating a robust sandwich structure. At IBC SOLAR, we use 2,0 mm x 2,0 mm glass layers, whereas some other market offerings use thinner 1,6 mm x 1,6 mm layers. This ensures greater durability and longevity.

Is Ethio Telecom a digital solution provider?

In just three years, ethio telecom has achieved its preliminary strategic goal of digital transformation and has become a digital and intelligent solution provider. However, it has continued on the transformation journey. In December 2023, ethio telecom and Huawei expanded the carrier's business scope by leveraging its current digital capabilities.

What is the bifaciality of a double glass module?

Bifaciality: The bifaciality of double glass modules produces a gain of around 10-11% compared to the power measured on the front panel alone, for TOPCon type modules under so-called BNPI (bifacial nameplate irradiance) test conditions.
