Huawei communication equipment base station upgrade plan

Overview

What is a Huawei base station?

Let's dive into a technical explanation. A base station, also known as an eNodeB (for 4G LTE) or gNodeB (for 5G NR) in Huawei's terminology, is a piece of equipment that facilitates wireless communication between user equipment (UE) like smartphones, tablets, and IoT devices, and the core network of the telecommunications provider.

What is Huawei base station backhaul microwave?

Based on leading wireless, transmission, and datacom technologies, Huawei base station backhaul microwave solution provides fiber-level broadband wireless backhaul capabilities, ultra-low latency, fully modular architecture design, and co-site integration with wireless networks.

What systems does Huawei offer?

Huawei provides comprehensive management and control systems, such as Huawei's U2000 or Huawei's Cloud BTS. These systems enable operators to monitor, configure, and manage base stations remotely, ensuring optimal network performance and reliability.

What is coordinated delivery of base stations & microwave devices?

Coordinated delivery of base stations and microwave devices supports fast base station deployment and service provisioning. 10 Gbit/s to-site large broadband backhaul, TDM/IP multi-service interfaces, 50 microsecond ultra-low latency, meeting 5G-oriented base station backhaul requirements.

What is a base station Power Supply Unit (PSU)?

Power Supply Unit (PSU): This provides the necessary electrical power to operate the base station components. It ensures that all parts of the base station have a consistent and reliable power source. Backhaul Interface: This is the connection between the base station and the core network.
