

## ContainerPower Energy Solutions

# Jordan s busiest communication base station wind and solar hybrid

## Overview

---

Jordan is one of the leading countries in the region in renewable energy (RE) adoption and clean energy growth. Solar or wind energy powers approximately 29 percent of the electricity grid and Jordan aim.

What is the best hybrid PV/wind system for Jordanian conditions?

Aiad et al. have proposed the optimal selection of Hybrid PV/Wind systems for Jordanian Conditions in Amman, they found that the best system size was 258.5 kW wind turbines, 170.25 kW PV, and 604.66 kWh battery bank, with a payback period of 6.93 years and LCOE of 0.0624 USD\$/kWh.

How can Jordan meet its energy needs?

This goal will be achieved by increasing the usage of renewable energy sources in the whole energy mix [3, 4]. Especially since Jordan has a large potential for renewable energy sources, particularly wind [3, 4], solar [5, 6], and bio waste , which can fulfil the country's energy needs if implemented correctly [ , ].

Is biowaste a viable source of energy in Jordan?

Especially since Jordan has a large potential for renewable energy sources, particularly wind [3, 4], solar [5, 6], and bio waste , which can fulfil the country's energy needs if implemented correctly [ , ]. Regarding the biowaste treatment in Jordan, most of the agro-industrial waste is used as animal feed.

Does Jordan have solar and wind potential?

Jordan has promising solar and wind potential. Establishing manufacturing infrastructure for generating electricity from solar and wind can serve to minimize GHG emissions while also creating jobs and upskilling, especially in rural.

Will extreme wind speed affect wind energy production in Jordan?

Wind energy production can struggle to deal with massive storms and hurricane which can rip into wind turbines and causes serious damages.

Fortunately, as it is shown in Table .19, that extreme wind speed is classified to be low confidence events in Jordan up to 2070. Whilst air temperature will lead to a decrease in increasing air density.

Is Jordan a potential energy producer?

Jordan has medium- and long-term potential as an energy producer of non-conventional and RE. The following are potential opportunities that are either in process or in the pipeline over the medium term: The \$2.9 billion project will provide 300 million cubic meters of desalinated water from the Gulf of Aqaba to Amman per year.
