

Overview

Can a mining base station be used as a communications tower?

Our mining communication base stations can also host mast systems up to 32 metres high, depending on your selected model, meaning it can easily be used as an off-grid communications tower. Or use our base station next to a fixed tower for power and communications without the need for site services.

What is a mining communication base station?

Our mining communication base stations are innovatively built to fit your specific project's needs. Our semi-portable LTE base stations are modular, standalone, fully self-supporting units forging the way in long range communications solutions for remote mining operations. Mining relies on communication technology.

Can a mining base station be used as an off-grid communications tower?

Quick to deploy and ideal for harsh and rugged environments, it will be up and running in its desired location in no time at all. Our mining communication base stations can also host mast systems up to 32 metres high, depending on your selected model, meaning it can easily be used as an off-grid communications tower.

What is a communication base station?

Communication base station setups will usually include a wide array of different technologies, including power supplies, data servers, head end, radio repeaters, and communication systems that allow for high-speed continuous information flow. It can also be used as part of a leaky feeder system in the communication network.

What is a mining communication system?

Obtain data critical to the growth and development of your mining operation, including data on production and output. Communication is important in any

industry – but it’s absolutely critical when it comes to the mining industry. Communication between your team and equipment is an integral requirement of a mining communication system.

How can communication technology improve surface mining operations?

Mining relies on communication technology. Wireless networks, real-time monitoring, constant data analysis – these communication systems ensure surface mining operations are running smoothly. And when you have an effective communications system, you’ll see an increase in productivity and a decrease in operational costs.
