This study explores the influence of cascade utilization and Extended Producer Responsibility (EPR) regulation on the closed-loop supply chain of power batteries. Three pricing decision models are established under the recycling model of the battery closed-loop supply chain are established in this.

This paper systematically reviews the research progress in the field of power battery recycling and cascade utilization, and analyzes it from four dimensions: technical path, economic model, policy impact and environmental benefit. In terms of technical paths, battery sorting technology based on.

Instead of gathering dust in landfills, these batteries are finding new life through energy storage battery cascade utilization - a process that's reshaping how we think about renewable energy economics. Let's explore why this trend is making waves in the energy sector and how it could slash.
