

## ContainerPower Energy Solutions

# New energy storage lead-acid battery

## Overview

---

Absorbent Glass Mat (AGM) and Gel batteries are the latest advancements in lead-acid battery technology. Are lead-acid batteries the future of energy storage?

As we move into 2025 and beyond, lead-acid batteries will remain a cornerstone of energy storage solutions, particularly in automotive, renewable energy, and backup power systems. With ongoing advancements in design, sustainability, and performance, lead-acid batteries will continue to play a vital role in shaping the future of energy storage.

Can lead batteries be used for energy storage?

Lead batteries are very well established both for automotive and industrial applications and have been successfully applied for utility energy storage but there are a range of competing technologies including Li-ion, sodium-sulfur and flow batteries that are used for energy storage.

Are lead batteries sustainable?

Improvements to lead battery technology have increased cycle life both in deep and shallow cycle applications. Li-ion and other battery types used for energy storage will be discussed to show that lead batteries are technically and economically effective. The sustainability of lead batteries is superior to other battery types.

Why are lead-acid batteries becoming more popular?

Lead-acid batteries' increasing demand and challenges such as environmental issues, toxicity, and recycling have spurred the development of next-generation advanced lead-carbon battery systems to cater to the demand for hybrid vehicles and renewable energy storage industries.

What is lead acid battery?

It has been the most successful commercialized aqueous electrochemical

energy storage system ever since. In addition, this type of battery has witnessed the emergence and development of modern electricity-powered society. Nevertheless, lead acid batteries have technologically evolved since their invention.

What is a Technology Strategy assessment on lead acid batteries?

This technology strategy assessment on lead acid batteries, released as part of the Long-Duration Storage Shot, contains the findings from the Storage Innovations (SI) 2030 strategic initiative.
