

## ContainerPower Energy Solutions

# Nordic energy storage power supply costs

## Overview

---

How efficient is the Nordic power market?

An efficient Nordic power market has been key to the integration of large shares of renewables in the Nordic countries, where the relative CO<sub>2</sub> intensity has settled at around 60 gCO<sub>2</sub>/kWh. A similar sharp. All five Nordic countries have seen significant increases in the utilisation of renewable energy.

How much energy does a Nordic country use?

The total energy consumption in the Nordic countries was 4 237 PJ in 2010, which is equal to about 8% of energy consumption in the EU-27. Industry accounts for about a third of energy use in the Nordic countries on average, considerably higher than most other developing countries.

What is the Nordic power outlook?

Our Nordic power outlook was developed using our EPSI Europe platform, built to provide on-demand insights into supply and demand fundamentals, and price formation. The new Nordic power report and datasets – including outlooks for each of the twelve bidding areas – are available to clients of our Europe Power Service.

What challenges does the Nordic power sector face?

The Nordic power sector, a global clean energy leader, faces new challenges as it enters the next phase of energy transition. Discover how the region is navigating rising electricity demand, complex risks and emerging technologies while striving to meet ambitious climate goals and ensure energy security.

Is additional Nordic power export possible?

Simulation results show the feasibility of additional Nordic power export. The results show that Denmark and Norway will be net exporters of power in 2050. The results show that wind power production is important for additional power export. The additional power export can cause a reduced national power

demand.

Which countries produce the most electricity in the Nordic countries?

The Nordic electricity market covers Norway, Sweden, Finland, and Denmark, and as many as 12 price areas. The Nordic countries produce above 400TWh in a normal year of which around 50% hydro power, 20% nuclear, 20% wind and 10% CHP.
