North Macedonia s new energy storage policy

Overview

The new Energy Law puts emphasis on the promotion of the implementation of energy storage and obliges power plants using variable renewable energy sources to install electricity storage within the power plant with an installed capacity equal to 20% of the installed capacity of the.

The new Energy Law puts emphasis on the promotion of the implementation of energy storage and obliges power plants using variable renewable energy sources to install electricity storage within the power plant with an installed capacity equal to 20% of the installed capacity of the.

On 14 May 2025, the Parliament of the Republic of North Macedonia adopted the new Energy Law, modelled on European Union (EU) acquis and aligning the country's energy policies with the EU's Clean Energy Package. It is expected that the novelties which the new Energy Law provides will significantly.

North Macedonia has made important commitments in its green transition, including the complete phase-out of coal-fired power generation and the deployment of 1.7 gigawatts of renewable energy by 2030, grid and storage investments for energy security and measures to support communities affected by.

Starting from 29 May 2025 a new Energy Law starts to apply in North Macedonia. This new regulatory framework serves for transposition of the Clean Energy Package into the national legislation and introducing major novelties, such as new development process for energy generation and storage.

The main goals of North Macedonia's Reform Agenda are grouped into five policy areas: By focusing on selected reforms in five priority policy areas, North Macedonia aims to unlock the potential benefits of progressive integration into the Union's single market, even prior to accession. This.

On May 21, 2025, the new Energy Law was published in the Oficial Gazete of the Republic of North Macedonia, adopted by the North Macedonia Assembly

on May 14. This systemic and reform-oriented law marks a pivotal step in the transformation of the national energy sector, aligning it with European. How is North Macedonia preparing for a green transition?

North Macedonia has made important commitments in its green transition, including the complete phase-out of coal-fired power generation and the deployment of 1.7 gigawatts of renewable energy by 2030, grid and storage investments for energy security and measures to support communities affected by coal transition.

How has the 2022 energy crisis impacted North Macedonia?

The 2022 energy crisis exposed and intensified the vulnerabilities in the energy sector of North Macedonia, revealing the risks of an insufficiently diversified power generation mix and weak regional market integration.

How is North Macedonia governed?

North Macedonia has established institutional, legal, and financial arrangements for elected officials to exercise effective power to govern that are not constrained by non-democratic veto powers or other undue influences. As in many other transition countries, there has long been a close relationship between business and political elites.

Why are low-cost tariffs a problem in North Macedonia?

Below-cost tariffs hinder necessary investments for a greener energy transition and limit competition in the retail market. North Macedonia committed early to decarbonisation, aiming to reduce net • greenhouse gas emissions by 82% by 2030 (compared to 1990 levels).

Is North Macedonia committed to implementing the EU reform agenda?

The commitment of North Macedonia to, and its application of, the political principles stated in Article 1 of the Agreement Establishing the Bank has continued since the adoption of the previous Country Strategy, in line with its efforts towards implementation of the comprehensive EU reform agenda.

Does North Macedonia have a 5G network?

North Macedonia has advanced its digital connectivity infrastructure, with nearly 100% coverage by 5G, 4G and 3G networks and achieving competitive global rankings in mobile and fixed-line broadband speeds. However, there is

currently limited capacity in the country to adopt new technologies.
