

ContainerPower Energy Solutions

Norway s new energy storage power source

Overview

Norway's capital just leveled up in the renewable energy game with its first pumped hydro storage (PHS) facility. Think of it as a mountain-sized battery that stores Oslo's abundant rainfall like digital coins in a crypto wallet - except this one actually solves real-world problems.

Norway's capital just leveled up in the renewable energy game with its first pumped hydro storage (PHS) facility. Think of it as a mountain-sized battery that stores Oslo's abundant rainfall like digital coins in a crypto wallet - except this one actually solves real-world problems.

Most batteries being produced today will be used to store energy for wind farms, industrial activities and off-grid rural areas," explains Nora Rosenberg Grobæk, former Head of Batteries at Invest in Norway, the official investment promotion agency of Norway. Whether for EVs or energy storage.

Did you know that a single hydroelectric dam in Norway, the Landsvirkjunin Dam, is currently storing more energy than all the batteries in the world combined?

That's right, this single dam can store enough power to supply over 200,000 homes for up to 24 hours, making it the largest and most.

Norway's capital just leveled up in the renewable energy game with its first pumped hydro storage (PHS) facility. Think of it as a mountain-sized battery that stores Oslo's abundant rainfall like digital coins in a crypto wallet - except this one actually solves real-world problems. Located 80km.
