

ContainerPower Energy Solutions

Solar panel exterior wall renovation scale

Overview

What are solar panels on the facade?

Solar panels on the facade are special photovoltaic panels that are integrated directly into the facade of a building. This innovative system not only offers a sustainable energy solution, but also the possibility to give buildings a modern and sleek appearance.

Are solar facade panels a sustainable solution?

At a time when sustainability plays a crucial role in architecture and development, solar facade panels offer an innovative solution. Solarix develops facade panels that provide both functional energy solutions and contribute to the aesthetic value of buildings.

Why are solar panels mounted vertically on the facade?

Because the solar panels are mounted vertically on the facade, more roof surface remains available for other applications. Solarix ensures that solar panels on the facade are seamlessly integrated into the architecture of the building, making them not only functional but also visually attractive.

Which colour is best for solar facade panels?

White is a highly sought-after colour for facade panels in building design because it gives a fresh and bright appearance. After extensive testing, we proudly present our white solar panels, available in two colour variations. Black is a colour that should not be ignored when developing aesthetic solar facades.

Why should a building have a solar facade?

The aesthetic addition of Solarix panels and sustainability of the facade increases the real estate value and rentability of a building. In addition, by generating energy, compared to a regular aluminium facade, the additional costs of the solar facade are recouped within 7 to 15 years (depending on the

orientation).

How can a solar facade be customized?

The panels can be customized in a variety of dimensions and mounting geometries to seamlessly integrate the solar facade into the architectural language of the project. Within its endless design possibilities, this system enables the replacement of traditional materials with dynamic solar facades. Solar Facades on Bornholm Hospital.
