# Solar panel prices plummet

## Overview

---

Over the past decade, the cost of solar panels has decreased globally by 90%, now being under \$0.20 (£0.15) per watt. Why are solar panels so expensive?

Solar panel prices have fallen by approximately 20% every time global capacity has doubled, following a trend known as Wright's Law. Solar panels can convert 22% of sunlight into electricity, whereas the first solar panels could only convert 1-2% into electricity. This has helped drive down costs as the panels are more efficient.

How much do solar panels cost in the UK?

Solar panel costs in the UK do not only comprise of just the actual solar panel. There are several other elements in the installation of solar panels which contribute to the overall price. On average, a 1kW solar panel system ranges from £1,500 to £3,000, depending on the manufacturer.

Are solar panels 'cheaper than expected'?

Calculations by Berlin-based Mercator Research Institute on Global Commons and Climate Change (MCC) found that the plummeting price of electricity produced by solar panels – down 87 per cent since 2013 – means the transition to renewable energy sources is “cheaper than expected”.

How does supply and demand affect solar panel prices?

Data collected by GOV.UK shows that the cost of solar panels in March 2024 either decreased, increased or remained stable depending on the wattage from the previous year. 4-10kW solar panel cost remained stable. 10-50kW solar panel cost increased by 5.8%. The above shows that within a single year, supply and demand influence solar panel prices.

How much do solar panels cost per watt?

Solar panels' price dropped to 8.7 cents per watt on July 2, the lowest level based on comparable data going back to 2011. Follow topics and authors from

How much will solar cost in 2023?

It expects prices to continue falling in the coming years, from an average of about \$250,000/MW in 2023 to roughly \$150,000/MW by 2028. According to S&P Global analysis, US solar levelized costs of energy are forecast to fall from \$39.58/MWh in 2023 to \$28.25/MWh in 2028.
