Solar panels installed in Iran

Overview

Designed to expand to 600 MW by March 2027, Aftab Sharq will become Iran's largest solar facility upon completion. The remaining 480 MW will be installed over the next 18 months in several.

Designed to expand to 600 MW by March 2027, Aftab Sharq will become Iran's largest solar facility upon completion. The remaining 480 MW will be installed over the next 18 months in several.

Iran is taking a significant step forward in renewable energy with an ambitious plan to develop 15GW of new solar capacity by 2030. This initiative which is centered around solar photovoltaic (PV) power stations marks a major shift in the country's energy strategy.

TEHRAN - Iran installed approximately 600 megawatts (MW) of solar power capacity in the past Iranian year (ending March 2025), marking a fourfold increase over the previous annual average of 150 MW, according to Alireza Parandeh Motlaq, deputy head of the Renewable Energy and Energy Efficiency Organization (SATBA).

Tehran, IRNA - President Masoud Pezeshkian has announced that more than 1,000 megawatts of solar panels have been installed since his administration took office more than a year ago, part of a drive to meet Iran's renewable energy goals.

Iran's Supreme Council for Economic Coordination (SCEC) has approved the allocation of \$1.5 billion for the installation of solar panels in response to the country's ongoing energy crisis.
