Solar power station power generation in Norway

Overview

How much solar power does Norway have?

As of the beginning of 2025, the total installed capacity for solar power in Norway was 767 MW. In 2023, over 90 percent of the solar power capacity was connected to the Norwegian power grid. Around 5 percent of solar installations in Norway had an installed capacity of more than 50 kW in 2023.

Is solar energy integration viable in Norway?

Effective energy management is crucial for aligning solar production with consumption patterns. This research study delves into the solar energy potential and capacity in Norway, aiming to assess the viability of solar power integration in the country's urban landscape.

How effective is solar power generation in Norway?

The effectiveness of solar power generation relies on the availability of sunlight. In Norway, the annual solar irradiation received exceeds the country's total energy consumption, making it particularly intriguing to evaluate the solar power potential in areas deemed suitable.

Are solar power plants a good investment in Norway?

Most solar installations are rooftop systems installed on private homes and industrial buildings, primarily covering the owners' own electricity consumption. In recent years, there has been growing interest in ground-mounted solar power plants. Norway's thermal power plants accounted for about 1.5% of the total production capacity in 2025.

Can Norway's buildings generate enough solar energy?

A new study has revealed that Norway's buildings could generate enough solar energy to meet nearly half of the country's annual electricity demand.

What type of energy does Norway use?

Norway's electricity generation is based on almost 100 per cent renewable energy. In 2023, it was based on 89 per cent hydropower and 9 per cent wind power. At the beginning of 2023, the power supply in Norway had a total installed production capacity of 39 703 MW.
