Solar system circulation system

Overview

The Solar System currently moves through a cloud of interstellar medium called the Local Cloud. The closest star to the Solar System, Proxima Centauri, is 269,000 AU (4.25 ly) away. Both are within the Local Bubble, a relatively small 1,000 light-years (ly) wide region of the Milky Way. Overview The Solar System consists of the and the objects that it. The name comes from Sōl, the Latin name for the Sun. It when a dense region of a collapsed, creating th.

The Solar System includes the Sun and all objects that are bound to it by gravity and orbit it. The describes the Solar System as all objects that are bo.

The Solar System formed at least 4.568 billion years ago from the gravitational collapse of a region within a large . This initial cloud was likely several light-years across and probably birthed several star.
