

ContainerPower Energy Solutions

South Korean energy storage power supply

Overview

The South Korean government is launching a multi-billion-won initiative to deploy large-scale energy storage systems (ESS) across the country, in a bid to alleviate mounting pressure on its transmission and distribution infrastructure. Which energy storage solutions are used in South Korea?

In South Korea, various energy storage solutions are used, including pumped hydro, electrochemical batteries, and others. Depending on the energy storage technology and delivery characteristics, an ESS can serve many roles in the electricity market.

Does South Korea have a battery storage system?

In terms of battery storage system deployment, South Korea stands among the global leaders. By the end of 2022, the cumulative installed capacity of battery storage in the country had reached an impressive 4.1 gigawatts. In October 2023, the South Korean government unveiled the Korean Energy Storage Systems (ESS) industry development strategy.

Will South Korea install 540 megawatts of battery energy storage systems?

The Ministry of Trade, Industry and Energy unveiled plans for a nationwide tender to install 540 megawatts of battery energy storage systems (BESS), marking the country's first major government-led deployment of its kind. The project is part of a broader effort to modernize South Korea's power grid and support the transition to renewable energy.

Are South Korean companies investing in energy storage systems?

Less than a decade ago, South Korean companies held over half of the global energy storage system (ESS) market with the rushed promise of helping secure a more sustainable energy future. However, a string of ESS-related fires and a lack of infrastructure had dampened investments in this market.

Why is Korea developing a lithium-ion battery energy storage system?

Most of Korea's lithium-ion battery energy storage systems have been built in the last ten years. The companies and the Korean government are supporting R&D on batteries to improve their performance, efficiency, safety, and output.

What is Gyeongsan substation – battery energy storage system?

The Gyeongsan Substation – Battery Energy Storage System is a 48,000kW lithium-ion battery energy storage project located in Jillyang-eup, North Gyeongsang, South Korea. The rated storage capacity of the project is 12,000kWh. The electro-chemical battery storage project uses lithium-ion battery storage technology.
