Storage duration is the amount of time storage can discharge at its power capacity before depleting its energy capacity. For example, a battery with 1 MW of power capacity and 4 MWh of usable energy capacity will have a storage duration of four hours.

Discover how to choose the best solar power storage capacity for your home's energy system in this complete guide to residential solar battery installation.

These calculations can be done using online tools, and if you're combining solar with battery storage, tools like the Sol-Ark Battery & Storage Calculator can help estimate the correct size for both your battery and inverter.

Battery energy storage capacity is the total amount of energy the battery can store, measured in kilowatt-hours (kWh) or megawatt-hours (MWh). Think of this as like the size of a water tank where you measure the water capacity in litres.
