

## ContainerPower Energy Solutions

# Standard plan for energy storage projects

## Overview

---

This Energy Storage Best Practice Guide (Guide or BPGs) covers eight key aspect areas of an energy storage project proposal, including Project Development, Engineering, Project Economics, Technical Performance, Construction, Operation, Risk Management, and Codes and Standards. What is the implementation plan for the development of new energy storage?

In January 2022, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system.

What should be included in a contract for an energy storage system?

Several points to include when building the contract of an Energy Storage System:

- Description of components with critical technical parameters: power output of the PCS, capacity of the battery etc.
- Quality standards: list the standards followed by the PCS, by the Battery pack, the battery cell directly in the contract.

Does the energy storage strategic plan address new policy actions?

This SRM does not address new policy actions, nor does it specify budgets and resources for future activities. This Energy Storage SRM responds to the Energy Storage Strategic Plan periodic update requirement of the Better Energy Storage Technology (BEST) section of the Energy Policy Act of 2020 (42 U.S.C. § 17232 (b) (5)).

What are the application scenarios for energy storage systems?

There is an extensive range of application scenarios for industrial and commercial energy storage systems, including industrial parks, data centers, communication base stations, government buildings, shopping malls and hospitals.

Can energy storage be a single high-level resource?

This report summarizes over a decade of experience with energy storage deployment and operation into a single high-level resource to aid project team members, including technical staff, in determining leading practices for procuring and deploying BESSs.

How many electrochemical storage stations are there in 2022?

In 2022, 194 electrochemical storage stations were put into operation, with a total stored energy of 7.9GWh. These accounted for 60.2% of the total energy stored by stations in operation, a year-on-year increase of 176% (Figure 4).
