# Swedish Chemical Energy Storage Project

## Overview

---

The HYBRIT initiative was launched in 2016 by owners SSAB, LKAB and Vattenfall with the aim of developing the world's first fossil-free ore-based iron- and steelmaking using fossil-free electricity and hydrogen gas. Who is funding a hydrogen storage project in Sweden?

The project is funded by the Swedish Agency for Economic and Regional Growth through the Just Transition Fund. "Developing safe and efficient underground hydrogen storage is crucial for the industry's transition to fossil-free production.

How many energy storage facilities are there in Sweden?

The opening ceremony for one of the 14 facilities was held in Eskilstuna. The Role of Energy Storage in the Energy Transition Since 2023, Ingrid Capacity and BW ESS have been working together on 14 large-scale energy storage projects strategically located within Sweden's electricity grid in price zones SE3 and SE4.

How many energy storage facilities will Ingrid capacity build in Sweden?

Ingrid Capacity plans to build an additional 13 energy storage facilities in Sweden by the end of 2024, with a total capacity of 196 MW/196 MWh. By the second half of 2025, the company aims to have over 400 MW/400 MWh of flexible resources in the Swedish electricity grid.

Why should Sweden invest in energy storage?

"Sweden faces increasing electricity demand, which must be addressed by expanding carbon-free energy production, strengthening energy grids, and improving energy storage capabilities. It is an honor to inaugurate the largest energy storage investment in the Nordic region.

How much money does Mecklenburg-Western Pomerania spend on hydrogen storage?

Mecklenburg-Western Pomerania Allocates €2.8 Million for FormaPort Project on Hydrogen Storage Mecklenburg-Western Pomerania has allocated €2.8 million for the FormaPort project, which aims to develop a system for storing and transporting hydrogen in the form of safe formate salts. Research.

Can hydrogen gas be stored at an industrial scale?

HYBRIT's pilot project for hydrogen gas storage has now been completed and reported to the Swedish Energy Agency. The results show that it is technically possible to store fossil-free hydrogen gas for the production of fossil-free iron and steel at an industrial scale.
