

## ContainerPower Energy Solutions

# Tajikistan Base Station Power Management

## Overview

---

Does Tajikistan have a power system?

The existing electrical transmission and distribution systems of Tajikistan, designed in the 1970s during the Soviet era, are also being upgraded and expanded, allowing transmission of power from Tajikistan to surrounding countries.

Why does Tajikistan need more transmission capacity?

Eliminate winter deficit, and ensure grid reliability. Certain parts of the Tajikistan transmission grid still suffer from transmission bottlenecks in the wake of the disconnection from the Central Asian Power System in November 2009. Additional transmission capacity is urgent.

What is Tajikistan's hydropower potential?

Tajikistan's hydropower potential is estimated at 527 billion kWh per year, which exceeds the existing electricity consumption of the countries of Central Asia by 300%. The country's largest project is the Roghun Dam Hydropower Plant project, which when completed is estimated to produce 3600 Megawatts of energy.

Can Tajikistan become a net energy exporter?

The Government of Tajikistan aims to transform itself from a net energy importer to a net energy exporter, on the strength of its potential for hydropower and solar power production. According to the World Bank, Tajikistan's power production is 92 percent hydropower, six percent hydrocarbon, and two percent from other sources.

Can solar energy be used in Tajikistan?

mountainous areas far from centralized power grids. Since the climate of Tajikistan is favorable for abundant solar energy, exploration of its potential may satisfy up to 10%–20% of energy demand in Tajikistan.<sup>5</sup> However,

because of the high costs, no industrial-scale public or private s.

Is Tajik coal a good source of energy?

for the Power Sector Regional Master Plan. Manila.740 coal deposits with more than 4 billion tons of coal reserves—sufficient for coal-fired power plants to complement hy ropower generation and produce hydrothermal synergy. Tajik coal has a high calorific value in the range of 6,680–8,460 kilocalories per kilo
