

ContainerPower Energy Solutions

Thailand Energy Storage Power Production Company

Overview

This article will mainly explore the top 10 energy storage manufacturers in Thailand including Amita Technologies, Banpu NEXT, Global Power Synergy Public Company Limited (GPSC), 3K Battery, Delta Electronics (Thailand), ITL-Engineering & Solution, SVOLT Energy Technology Thailand, BYD (Thailand), Sunwoda, and Tritex. Does Thailand need a battery energy storage system?

Thailand may lack the Battery Energy Storage Systems (BESS) necessary to navigate supply and demand challenges. The 2024 PDP draft included 10,000 MW of BESS, but this may see the country struggle to fulfil carbon neutrality and Net Zero commitments over the coming decades.

How many mw can a solar generator store in Thailand?

Their total combined storage capacity was 994 MW. Interestingly, this allowed generators to sign semi-firm power purchase agreements (PPAs) with the Electricity Generating Authority of Thailand (EGAT) with minimum availability guarantees. Many solar projects in Thailand have non-firm PPAs in place due to a lack of storage on site.

Why is battery storage a problem in Thailand?

This is partly due to a lack of clarity on how battery storage fits into existing electricity infrastructure. In 2022, the Thai government approved 24 BESS projects, all of which were located alongside solar operations. Their total combined storage capacity was 994 MW.

Why do some solar projects in Thailand have non-firm PPAs?

Many solar projects in Thailand have non-firm PPAs in place due to a lack of storage on site. Arrangements, including BESS, reduce the strain on power grid infrastructure and allow for better planning. On the downside, these do not improve grid stability, nor do they provide power generators with more pathways to increase revenue.

How much electricity will Thailand produce in 2024?

These are set to make up 51 percent of the country's total electricity production, up from 36 percent which was called for in the 2018 PDP. The 2024 PDP draft provided a more detailed breakdown of how Thailand will reach this goal. During the plan's lifespan, 47,251 MW of new electricity will be sourced with 34,851 MW coming from renewables.

Does Amita support Thailand's EV ecosystem?

With a current capacity of 1 GWh, expandable to 4 GWh by late 2025, Amita supports Thailand's EV ecosystem, backed by EA's renewable energy expertise and government incentives like a 2 billion baht BOI grant.
