UK installs solar energy storage

Overview

There were 21,125 small-scale solar installations in the United Kingdom in May 2025, according to accreditation body MCS, which also recorded a record month for battery energy storage additions.

There were 21,125 small-scale solar installations in the United Kingdom in May 2025, according to accreditation body MCS, which also recorded a record month for battery energy storage additions.

Latest MCS data for small-scale renewables reveal a strong month for solar installations up to 50 kW, double-digit growth for battery energy storage installations and a milestone reached despite a muted month for heat pump installations. May 2025 was a strong month for small-scale solar.

Despite a 12% year-on-year fall in the capacity of newly submitted planning applications in 2024, there is still a strong interest in the UK energy storage market as a whole. This article takes a close look into the battery energy storage system (BESS) pipeline, which shows that the future growth.

Homeowners across Britain are turning to solar storage batteries as a smart solution to maximise solar energy usage and reduce energy bills. Instead of letting excess solar power go back to the grid, these systems store it for later — especially useful in the evening or during outages. Whether.

The UK's solar energy and battery storage sector is undergoing a rapid transformation, bolstered by ambitious climate targets and supportive policies. Solar photovoltaics (PV) capacity has rebounded since the end of feed-in tariffs, while energy storage is scaling up to enhance grid reliability.

Solar UK is an MCS registered company. As well as the design, supply and installation of systems, we offer service and maintenance solutions to ensure your system is optimised throughout its economic working life. If you have the room and you have the budget, then you should consider having a.

The pipeline of battery storage projects has continued to grow steadily again, from 84.4GW in December 2023 to 95.5GW in May 2024. This edition of the

EnergyPulse report on Energy Storage shows there is 8.7GW of batteries in operation and under construction and more than 30GW projects have now been.
