# Use electric fans to cool solar inverters

## Overview

---

Solar fans are designed to circulate air around the inverter and help keep it cool. If you don't have a solar fan, you can try pointing a regular fan at the inverter. Just be sure not to blow the dust and dirt from the solar panels onto the.

Solar fans are designed to circulate air around the inverter and help keep it cool. If you don't have a solar fan, you can try pointing a regular fan at the inverter. Just be sure not to blow the dust and dirt from the solar panels onto the.

Scroll to the bottom of any page to find a sun or moon icon to turn dark mode on or off! I'm using a small fan to shoot down and cool my inverter. Should I concentrate on cooling the left side where the watts go in?

middle?

or end?

Does it not have an internal fan of its own?

It's certainly big.

Update 10-19-2022 - all my active solar grid tie inverters have these upgraded auxiliary fans, and they are working fantastic. I am able to control the temperature of the inverter very easily, plus double fans gives redundancy along with the cooler operating temperatures. more Update 10-19-2022.

At present, most of the mainstream single-phase inverters and three-phase inverters below 20kW on the market use the natural cooling method. Forced air cooling is mainly a method of forcing the air around the device to flow by means of a solar inverter cooling fan, so as to take away the heat.

Worth adding cooling fan for inverter?

I've had a grid tied system for 6 years using two outside mounted SMA

inverters. We have hot summers here (Sacramento Valley) and I have the inverters shaded. However it just occurred to me that possibly a small cooling fan might increase inverter lifespan as.

An inverter cooling fan is a device that can be used to neutralize the inverter temperature during the conversion process. In this article we will discuss the inverter cooling fan, starting from how it works, the benefits, various problems with the fan and their solutions, and tips on maintaining.

By installing a cooling fan near the solar inverter, you can help circulate air better and keep the solar inverter cool. The next step is to shade the inverter. Suppose it is possible for you to provide shade for the solar inverter to protect it from direct sunlight, which causes a temperature.
