

ContainerPower Energy Solutions

Wall-mounted solar collector container

Overview

What is a solar container?

Our Solar Containers are designed in a way to maximize ease of operation. It's not only meant to transport PVs but also to unfold them on site. It is based on a 20' sea container. The efficient hydraulic system helps quickly prepare the Solar to work. Because of their construction, our containers offer unmatched flexibility and mobility.

What is a solar wall system?

SolarWall systems are all-metal and have no ongoing maintenance associated with them. Available in a variety of panel profiles and colors, the system brings a measure of architectural versatility that sets it apart from other renewable energy technologies. Buildings with centralized heating and ventilation systems draw fresh air through HVAC units.

Where can I buy a solar battery rack & enclosure?

NAZ Solar Electric carries high-quality racks and enclosures for your batteries. We stock a wide range of sizes to fit your specific needs. We carry racks and enclosures from a number of manufacturers such as Simpliphi, Outback, and Midnite Solar. Shop our selection to find the one that right for your power system. Pay over time with Affirm.

What is a solar wall heating system?

The SolarWall technology is a solar air heating system that uses the power of the sun to heat your building's ventilation air. It minimizes energy consumption, heating costs and carbon emissions throughout the heating season. It directly addresses one of the largest sources of building energy consumption: Indoor space and ventilation heating.

How much energy does a solar wall displace?

shown that effectively-designed SolarWall systems can displace 20-50% of the

building heating load. The SolarWall technology is sometimes referred to by different names in the marketplace, from unglazed transpired collector (UTC) or transpired solar collector (TSC), to solar heated wall, solar ventilation preheating or solar perforated wall.

What is a SolarWall single-stage system?

SolarWall Single-Stage systems can heat the incoming fresh air up to 75°F above ambient temperatures. In this configuration, significantly less heating fuel is required to heat the building's fresh air supply. In fact, independent monitoring studies have
