What to do if the battery cabinet is crushed and deformed

Overview

Your best solution is to put the battery in a fireproof container. A battery like this is a potential fire hazard and should be isolated to prevent property damage in the event it does catch fire. RC folks use fireproof charging bags to protect against these types of situations. No, don't freeze it.

Your best solution is to put the battery in a fireproof container. A battery like this is a potential fire hazard and should be isolated to prevent property damage in the event it does catch fire. RC folks use fireproof charging bags to protect against these types of situations. No, don't freeze it.

However I can't safely dispose of it just yet, so the question is, will it be safe enough to just leave it unused on a table until I can get around to dispose of it safely, or is it safer to keep it cool/frozen?

Your best solution is to put the battery in a fireproof container. A battery like this.

It's essential to deal with a damaged battery safely because attempting to use or charge it can be incredibly dangerous. Even if there are no visible signs of leakage or damage on the outside casing of the battery, you should exercise caution before using it again as internal damage may have.
